**DETAILED ACTION**  
**EXAMINER'S AMENDMENT**

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Paul Evans (36,130) on 07/17/2008.

**IN THE DISCLOSURE**

Please replace the abstract with the following:

A method and apparatus for injecting medicine from a pre-filled container into a patient through an injection needle. After use, the needle is automatically shielded to prevent inadvertent contact with the needle. The device operates by pumping medicine out of the vial and into a transfer chamber. The medicine is then expelled from the transfer chamber into a patient during an injection stroke. At the end of the injection stroke, the needle is released for retraction, and the spring retracts the needle for shielding. Preferably, the device includes an injector assembly and a vial holder assembly. The injector assembly has a needle retainer for releasably retaining the needle in a projecting position against the bias of a spring. The vial holder assembly is attachable with the injector assembly and is operable to transfer fluid from the vial and into the transfer chamber for an injection.

### **IN THE CLAIMS**

Please amend the claims as follows:

31. (Currently Amended) The device of claim 24 19 comprising a valve controlling the flow of medicinal fluid from the chamber.

#### ***Allowable Subject Matter***

Claims 1-2, 4, 6-8, 10-17, 19, 25-31, 54-55, 57-62, 64-65, 68-71, 73-77, 79, 80-84, and 86-89 are allowed over the prior art of record 06/30/2008.

The following is an examiner's statement of reasons for allowance: The claims in this application have been allowed because the prior art of record fails to disclose either singly or in combination the claimed device of an injection device for injecting medical fluid from a vial, wherein the device has a transfer chamber for receiving fluid from the vial to and to pressurize the fluid for injection. The fluid can then be injected into the patient through a connected needle and after use a shield can be used to prevent contact with the contaminated needle.

The closest prior art of record is O'Neil et al. (USPN 5,637,087) and Romano et al. (USPN5,797,336), however these references do not disclose the device as claimed or described above.

Regarding claims 1, 19, 54, 61 and 80, the closest prior art of record fails to teach among all the limitations or render obvious the fluid transfer system comprising an air-pump chamber and a transfer chamber that are linked via a transfer seal which facilitates pressurized fluid injection from a vial.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
